Neither direct intervention in the currency markets, nor the introduction of a quantitative easing program (creation of money to purchase government debt) is going to have a significant downward effect on the Canadian dollar. With the weak outlook for the U.S. economy likely to persist for a considerable period, the Canada bond yield curve still below the U.S. Treasury yield curve and the Canadian dollar not overvalued at \$0.92 (U.S.), any central bank intervention would only amount to pushing on a string. Moreover, it is a well documented fact that the Bank of Canada's record of currency interventions in the past have been exercises in mediocrity.
